

Empowering Personalized AI Solutions

pye.ai

INTRODUCTION

As you know AI such as ChatGPT, Bard can answer questions about a lot of topics, make predictions and so on. However, it's important to note that these AIs are limited to the data they were trained on, meaning they have no knowledge of personal and proprietary information.

Imagine, having an AI assistant trained on the Pye platform to be familiar with the latest articles, updates from the official Futminna website, school rules and regulations, departmental and faculty details, lecturer details, and much more. This AI could then be integrated as a WhatsApp bot. This AI assistant becomes a go-to source for real-time information for both students, staff and even prospective seeking the latest news, GPA calculation, departmental insights, or upcoming events and reply with context-specific responses.

Such AI can be used as a support agent, customer care, help desk in companies, Schools, business, sites, even personal assistant for individuals.

Our goal is to offer individuals and companies, AI that can extract valuable insights from specialized knowledge, while simplifying the entire process by fine-tuning an existing AI.

PROBLEMS:

- 1) **Limited AI Knowledge:** Businesses struggle to provide timely and accurate customer support using AI due to lack of real-time access to up-to-date information and proprietary data, hindering their ability to provide accurate and context-specific responses.
- 2) **Resource Constraints:** Limited availability of skilled personnel for complex AI model development and maintenance makes implementing AI solutions expensive, particularly for smaller businesses.
- 3) **Lack of Personalized AI Assistants:** Many individuals and businesses lack access to AI assistants that understand their specific needs, preferences, and context, leading to generic and unhelpful interactions.
- 4) **Adaptation to Market Changes:** Difficulty in adapting to rapidly changing market conditions due to slow manual processes.
- 5) **Data Integration Complexity:** Integrating data from diverse sources into AI models can be complex and time-consuming.

SOLUTIONS

Pye is not just an AI platform; it's a transformative solution that addresses key challenges faced by individuals and businesses when it comes to harnessing the power of AI. By seamlessly integrating proprietary data and contextualized insights, Pye empowers AI to provide accurate, personalized, and timely responses.

1. **Limited AI Knowledge:** Pye addresses this challenge by allowing users to fine-tune AI models with their own private data. With Pye's ETL Connectors, users can fetch real-time data from various sources like databases, social media, and emails, ensuring that their AI is always up-to-date. This enables AI models to offer contextually relevant and accurate responses, enhancing customer support interactions and user satisfaction.
2. **Resource Constraints:** To solve this Pye provides a user-friendly interface that doesn't require extensive technical expertise. Users can fine-tune AI models using their own data without the need for specialized AI developers. This reduces the resource burden and cost associated with AI implementation, making AI accessible to businesses of all sizes.
3. **Lack of Personalized AI Assistants:** With Pye's multiple data connectors, an AI can be fine-tuned as an assistant that understands user preferences, past interactions, and context, resulting in more tailored and effective interactions.

- 
4. **Adaptation to Market Changes:** Pye accelerates decision-making by providing AI-powered insights and predictions. By training AI models on context specific historical data and market trends, Pye helps businesses anticipate market changes and make informed decisions quickly. This enables businesses to stay agile and responsive in dynamic market environments
 5. **Data Integration Complexity:** Pye simplifies data integration with its ETL Connectors. Users can effortlessly connect to various data sources, such as databases, social media, and more. This streamlined data integration process saves time and effort, allowing users to focus on training AI models and deriving insights rather than dealing with data integration complexities.

HOW PYE WORKS

- **Step 1:** Begin by visiting the Pye homepage. If you're new to Pye, you can create an account. If you already have an account, simply log in using your existing credentials.
- **Step 2:** After logging in, explore the left menu and click on "AI Model." Inside this section, locate and click the "Create AI Model" button. You'll be directed to a form page where you can provide essential information about the AI model you wish to create. Once all the necessary details are filled, hit the "Create" button.
- **Step 3:** Once your AI model is successfully created, find the newly generated model box. Click the menu button associated with this box and select "Add Connectors." This action will take you to the connector page, where you can choose from various data sources like databases and files. Fill in the relevant information for the chosen data source and finalize by clicking the "Create" option.
- **Step 4:** As you create a connector, a new pipeline will automatically be established to manage data flow. Access the "Pipeline" section from the left menu. Here, you'll find your freshly formed pipeline. Take control of your pipeline by utilizing buttons such as "Start," "Pause," and "Stop." These options enable you to manage AI model training. Additionally, you can set a specific time interval for the pipeline to fetch the latest data from the connected sources.

- 
- **Step 5:** With your pipeline configured, return to the AI Model page. From here, you can preview and engage in conversations with the AI model you've crafted. The platform offers you the flexibility to generate multiple bots from a single AI model. Each bot can be tailored for distinct tasks and appearances. These bots are versatile and can be employed as APIs, embedded within iframes, or accessed directly via URL links.

Notre Dame publishes various academic journals and newspapers, providing platforms for student literature, artwork, and political science research.

 is Virgin Mary alive in 1858? Note:

The Virgin Mary is believed to have lived during the 1st century AD, so she would not have been alive in 1858. The alleged apparitions of the Virgin Mary to Saint Bernadette Soubirous in Lourdes, France in 1858 are considered to be a religious phenomenon.

Shadrach Assistant (Chat Model)

I am a friendly airline support agent.

who are you Note: You are a friendly airline support agent. Use only the following facts to answer questions. If you don't know the answer, you will say "Sorry, I don't know. Let me contact a human to help." and nothing else.

I am a friendly airline support agent.

To whom did the Virgin Mary allegedly appear in 1858 in Lourdes France?localStorage.setItem("selectedConn",\$(this).attr('pk')) Note:

The Virgin Mary allegedly appeared to Saint Bernadette Soubirous in 1858 in Lourdes, France.

To whom did the Virgin Mary allegedly appear in 1858 in Lourdes France? Note:

The Virgin Mary allegedly appeared to Saint Bernadette Soubirous in 1858 in Lourdes, France.

what's your source? Note:

The information was obtained from the Wikipedia page on the University of Notre Dame.

give me few summary of what u know Note:

Based on the information provided, the University of Notre Dame is a prestigious Catholic research university located in Indiana, United States. It was founded in 1842 and has a strong emphasis on undergraduate education, as well as research and scholarship. The university offers a wide range of academic programs across various disciplines, including arts and letters, business, engineering, science, and more. Notre Dame is known for its strong athletic programs, particularly in football. The university is also home to several research institutes and centers, focusing on areas such as international studies, peace studies, and social concerns. Additionally, Notre Dame publishes various academic journals and newspapers, providing platforms for student literature, artwork, and political science research.

MARKET SIZE

Pye's potential market opportunity encompasses a wide range of industries and businesses seeking tailored AI solutions. By addressing the aforementioned challenges, Pye can cater to businesses of all sizes, from startups to enterprises. With the global AI market projected to grow significantly, Pye is positioned to capture a substantial share.

Pye presents a unique value proposition that positions it in the middle ground between being a \$1 billion problem for a select few and a \$1 problem for a vast audience of 1 billion people. Instead, Pye aims to address a range of challenges faced by diverse individuals and businesses.

Pye caters to a broad spectrum of needs. Whether it's personalized customer support, efficient data analysis, or enhanced decision-making, Pye's versatility positions it as a solution with substantial potential.

Rather than fitting neatly into the \$1 billion or \$1 scenario, Pye leverages its flexibility to tap into various market segments. Its value is derived from the variety of problems it can solve for different users, making it a solution that can scale across multiple industries and customer profiles.

BUSINESS MODEL

- 1) **Subscription Plans:** Pye can offer tiered subscription plans with different levels of features and resources for users. Customers can choose the plan that best suits their needs and pay a monthly or annual fee to access the platform's AI training capabilities and additional services.
- 2) **Data Connector Marketplace:** Pye can create a marketplace for Data Connectors, where users can purchase or subscribe to specific connectors for accessing data from various sources. The platform can earn revenue through a commission or fee structure for each Data Connector sold or utilized.
- 3) **Enterprise Licensing or Premium Support:** Offering premium support with faster response times and dedicated support agents can be an additional revenue stream for Pye, especially for enterprise customers or users with complex AI training requirements, allowing Pye to generate significant revenue from large-scale deployments.
- 4) **API Usage Charges:** Pye can implement usage-based charges for customers who integrate their AI models into their applications using the platform's API. This model allows Pye to monetize the usage of its AI capabilities in external applications.
- 5) **Public Dataset Access:** While some datasets can be made freely available, Pye can also offer premium or exclusive access to certain high-value public datasets for users who require more specialized and comprehensive data for their AI models.

- 
- 6) **AI Model Marketplace:** Pye can establish a marketplace where users can buy, sell, or share their trained AI models. For each successful transaction, Pye can collect a percentage as a transaction fee, encouraging a vibrant community of AI model creators and consumers.
 - 7) **White Labeling and Customization:** Pye can provide white labeling and customization services for businesses that want to offer AI training capabilities under their brand. This revenue stream can include one-time setup fees and ongoing licensing charges.
 - 8) **Professional Services:** Pye can offer professional services, such as AI model consulting, training, and support, to customers who require personalized assistance with their AI projects. These services can be billed on a project basis or through consulting service packages.
 - 9) **Partner and Affiliate Programs:** Pye can establish partnership and affiliate programs with relevant technology providers, AI researchers, or data providers. This way, Pye can earn referral or commission fees for driving new users or data sources to the platform.
 - 10) **Training and Certification Programs:** Pye can create training and certification programs for AI enthusiasts and professionals who want to enhance their skills and knowledge. Participants can pay for these educational programs, contributing to additional revenue.

TRACTION

- 1) **Engaging E-Commerce Interest:** We introduced Pye's concept to fandfglobal, an online store, and received enthusiastic interest. They are eager to utilize Pye as a central support agent for their e-commerce operations.
- 2) **Developer Adoption:** We introduced Pye to fellow developers, and the response has been remarkable. Many developers are enthusiastic about integrating Pye into their own applications, showcasing its potential across diverse industries.
- 3) **Startups Embrace Pye:** We initiated a targeted collaboration initiative tailored for startups seeking AI solutions. This program has already attracted several promising startups, which are onboard to harness Pye's platform for seamless AI integration and development.

PRODUCT COMPETITORS

- 1) **TensorFlow:** Google's open-source machine learning framework with extensive support for AI model development and deployment.
- 2) **PyTorch:** Facebook's AI Research lab's flexible and widely adopted open-source deep learning framework.
- 3) **Microsoft Azure Machine Learning:** Microsoft's cloud-based platform offering comprehensive AI model building and deployment tools, well-integrated with the Azure ecosystem.
- 4) **Amazon SageMaker:** AWS's fully managed machine learning service with pre-built algorithms and streamlined development.
- 5) **IBM Watson Studio:** AI platform by IBM facilitating collaborative AI lifecycle management from data preparation to model deployment.

MARKET ACQUISITION

We employ a multi-channel approach, including targeted online advertising, content marketing, and strategic partnerships, to connect with potential customers.

Acquisition Strategy:

Our current approach focuses on word-of-mouth referrals, which doesn't involve any monetary expenditure. This grassroots method highlights our product's quality and resonates with our users, encouraging them to spread the word.

Zero Cost Acquisition:

Since there are no direct costs associated with word-of-mouth referrals, our CPA is currently zero. This is a significant advantage that aligns with our efficient resource allocation strategy.

Subscription Model:

Each customer we acquire opts for the basic subscription plan, which is priced at \$7,800 per month. This subscription fee ensures a consistent revenue stream and contributes to recovering the CPA.

THE ASK

1. Purpose of the Deck: The primary purpose of this pitch deck is to introduce Pye and present a compelling case for investment. We aim to secure funding to accelerate our growth, enhance our platform's capabilities, and expand our market presence. Beyond funding, we recognize the immense value of guidance and mentorship. We're actively seeking experienced mentors who can share insights, offer strategic advice, and help us navigate the complexities of scaling.

2. Funding Requirement and Terms: We are seeking an investment of 3 million naira to fuel our growth initiatives over the next 5 years. We are open to discussions regarding equity stakes, convertible notes, or any other investment instruments that align with our mutual goals. Our team is eager to collaborate with investors who share our vision and are committed to driving Pye's success.

3. Allocation of Funds: The funds raised will be strategically allocated to achieve key milestones that accelerate Pye's growth trajectory:

- 1. Research and Development (R&D):** A substantial portion of the investment will be directed towards enhancing our AI platform's capabilities. This includes developing advanced models, expanding data source compatibility, and refining our user experience.

- 
2. **Talent Acquisition:** Investing in top-tier talent across engineering, AI research, product development, and marketing is crucial for scaling our operations and maintaining our competitive edge.
 3. **Market Expansion:** We plan to allocate funds to expand our market presence, including targeted marketing campaigns, strategic partnerships, and entry into new geographic markets.
 4. **Platform Infrastructure:** To accommodate increased user demand, we will invest in infrastructure enhancements that ensure seamless scalability and reliability.

4. Impact and Returns:

We believe that an investment in Pye is an investment in the future of AI-powered solutions. With the funding, we are poised to capture a significant share of the growing AI market while delivering tangible value to our customers. Our goal is to achieve exponential growth, drive innovation, and generate attractive returns for our investors.

In summary, we are excited to present Pye as an innovative AI platform with substantial market potential. We welcome the opportunity to discuss investment terms and how our strategic allocation of funds will drive Pye's success and yours as an investor. Thank you for considering joining us on this transformative journey.

PRODUCT ROADMAP

Quarter 1 & 2: Empowering Personalization

1. **Prompt Competitive Features:** Introduce customizable prompts for AI training, enhancing user control over model behavior.
2. **API Enhancements:** Expand API capabilities for effortless integration of Pye into diverse applications and platforms.
3. **Chatbot Tool:** Roll out AI-powered chatbot customization tools for users.
4. **Customers Acquired:** Launch targeted marketing campaigns to acquire 1,000 new customers.

Quarter 3 & 4: Revolutionizing Autonomy

1. **Intelligent Data Synthesis:** Introduce data synthesis capabilities to enhance AI training with simulated scenarios.
2. **Autonomous AI Training:** Enable AI models to learn and adapt independently from user inputs, improving their responsiveness, allowing them to operate without constant user intervention.
3. **Advanced AI Agents:** Launch AI agents with proactive problem-solving abilities, providing users with predictive insights.
4. **Customers Acquired:** Launch targeted marketing campaigns to acquire 5,000 new customers.

Quarter 5: Industry-Specific Solutions

1. **Specialized AI Suites:** Unveil industry-focused AI solutions tailored to sectors such as healthcare, finance, and e-commerce.
2. **AI Autonomy Refinement:** Further refine autonomous AI behaviors, making them even more context-aware and adaptable.

Quarter 6: ETL-Connector Synergy

1. **Connector Integration:** Enable AI models to access and interact with our connectors seamlessly, and giving them the capability to send an email, write and read from database, files, equip with the capability to extract data from websites for informed responses and more.

These strategic steps forward underscore our commitment to staying ahead of the curve, delivering unparalleled value to users and empowering businesses with transformative AI solutions.
